Kidde fire alarm going off

We've all heard those horror stories of people succumbing to the effects of carbon monoxide. That's because it's a highly poisonous gas which has no colour, taste or smell. That makes it impossible to detect without an alarm. And that's why your home needs to have at least one carbon monoxide alarm installed. That way, you know your family is being kept safe with something keeping a watchful eye over them, no matter what. Alarms are far better than the 'Black Spot' indicators—not only are these not accurate, but they also won't alert you to a potential risk. But what do you need to do with the carbon monoxide alarm once you get it? Some are free-standing and require no fixing, but many of them do. However, they're relatively simple to install as they only require a few screws in the wall. But how many you need, and the best places to install them, depends on the risks which are present in your home. So if you're only going to purchase one, then it needs to be placed next to the area where everyone sleeps. That way, should the alarm ever sound, it will be loud enough to wake up everyone in the home. This is the best location as we're at our most vulnerable when we're sleeping, so this is where you need to have one installed. For a better level of protection, you should also place CO alarms in the same rooms where the potential hazards exist. They are better off being fixed on the wall—ideally, secured at least 15cm away from the ceiling. And when placed in the same room as a possible source, it's better to place them between 1m and 3m away from the appliance. The alarm needs to remain in the open air so it's monitoring the same air that everyone is inhaling, so make sure it isn't blocked by furniture. And in bedrooms and living rooms, it may be better to place it at the same height as people sleeping or sitting. However, it is possible to fix them to the ceiling too. In fact, if you have a combination smoke and CO alarm, it's the best place to install it. But you will need to make sure it's at least 30cm away from walls or other obstructions, like light fittings. And just like your smoke alarms, CO alarms need regular testing and maintaining too. There are many risks which would benefit from being partnered with a CO alarm. That way, you can quickly become aware of any fault that may arise and resolve it as soon as possible. In rented accommodation, fire safety regulations now state that landlords must provide a CO alarm where there is a used fireplace. However, it must be stressed that having an alarm is not a replacement for the annual inspection of gas appliances. And it should also not replace having your chimneys and wood-burning appliances checked regularly. Possible risks include faulty: Fireplaces, solid-fuel burning appliances; Even LPG gas appliances in caravans and boats are possible sources, as are having barbecues in confined areas, such as in a tent. But even if you don't have any of these potential carbon monoxide sources, you should still have an alarm. CO has been known to seep through the walls, floors, and ceilings of neighbouring homes. Should your CO alarm sound, it must be taken seriously. The first course of action is to open all doors and windows for ventilation and get everyone out to safety. Turn off any possible appliances which may be causing the leak and get someone out immediately to check they are safe to use. You may want to call the Gas Emergency Service 24-hour line on 0800 111 999. And if anyone is showing any possible signs of poisoning, or generally feeling unwell, you must seek medical advice immediately. Make sure you're taking the relevant steps to keep yourself, your family, and those living around you as safe as possible. You can do this by ensuring trained professionals install, maintain and service your appliances, and by having at least a CO alarm in your home. Click here to check out the whole range of carbon monoxide alarms. While battery-powered smoke detectors are easier to install, hardwired models are far more reliable because batteries can die at any time without you knowing — and this can leave you and your family in danger. So, if you're looking to buy a hardwired smoke detector, you've made the right decision. In this post, we'd be revealing and reviewing some of the best hardwired smoke detectors on the market. Best Hardwired Smoke Detectors: Our Top Recommendations We understand that the market abounds with hardwired smoke detectors by different brands, and making the right choice from the heap of options can be a huge challenge. So, we decided to help you out with the sifting. Our research team spent several hours scouring the market and comparing several hardwired smoke detectors in terms of sensitivity, reliability, durability, buyer reviews, and price. And from our initial long list of options, we kept cutting out the low performers until we were left with these top picks. 1. First Alert BRK SC701BV Hardwired Smoke and Carbon Monoxide (CO) Detector Check Price on Amazon.com If you're looking to keep your family safe from smoldering fires and invisible gases, the First Alert BRK DC701BV is a great option to consider. It features electrochemical carbon monoxide technology that detects the presence of CO in your home and a photoelectric smoke sensor for catching large particles typical of smoky, smoldering fires. Even more, this device has a voice alarm, which experts say is more effective in waking small children than a simple tone. It is also equipped with location capabilities to let you know where the danger is originating from your home. How does this work? When setting up your device, you can assign a name to different rooms, up to 11 locations in your home so when there's an alert, you can instantly tell where it's coming from. On top of the voice alert, this detector also has a powerful 85 dB siren that goes off when it picks up any danger but a single mute or silence button silences any nuisance alarms that may occur. The button may also come handy for testing all alarm functions. This hardwired smoke detector can particularly connect to other BRK or First Alert detectors to ensure all alarms will sound when a threat is detected. As its name indicates, the First Alert BRK SC701BV can be hardwired into your home's electrical system so you don't have to worry about frequent battery replacement. However, there's a 9V battery backup in the event of a power outage and it provides an end-of-life alert when the unit needs replacing. A major advantage of this unit is that it uses the same interconnection cable as the other models of First Alert/BRK fire alarms, so no rewiring is needed. Also, the company claims that this unit can last up to 10 years. However, many users report that the smoke detector sets itself off with false alarms after a few years of use (and in some instances, months), indicating the need for a replacement. Pros Alarm is very loud Easy to install Affordable Alarm and voice alerts Rigorously tested to meet UL standards Cons High tendency to trigger false alarms 2. First Alert SC9120B Hardwired Smoke Detector and Carbon Monoxide (CO) Detector Check Price on Amazon.com Balancing features, reliability, and affordability, the First Alert SC9120B is a fine option. This carbon monoxide detector pulls double duty as a smoke alarm, making it one of the best on the market since those are the two huge sources of danger in any home. Equipped with both ionization and electrochemical sensors, this device is really good at the job of detecting smoke from both slow and smoldering fires as well as fast-burning, flaming fires (and maybe the occasional burnt piece of toast.) The indicator lights on the face of the unit display the presence of smoke or carbon monoxide while an 85-decibel siren is ear-piercingly loud, serving as a clear warning of danger. While the First Alert SC9120B might not be the fanciest smoke alarm out there, it does sport some nice features like its 10-year warranty and interconnectivity. In other words, this model can link up to 18 compatible First Alert devices such as smoke alarms, carbon monoxide alarms, bells, repeaters, etc. If one triggers, all the connected units sound the warning Furthermore, it comes with a 9-volt battery backup for continued function in the event of a power outage and you never have to worry about replacing it as it can be easily accessed when mounted. The alarm also notifies you long before it is going to die to avoid those 2 a.m. battery chirps. This smoke detector is simple to use with a single test/silence button and universal mounting brackets as well as tamper-resistant brackets to make installation easy. Although this device can last up to 10 years, the manufacturer stands behind this smoke detector with a 10-year warranty that guarantees that you will get a replacement if it stops working. Additionally, the SC9120B is fully certified, which means that it meets the appropriate standards for safety in the home. Pros Extremely easy to install Low battery warning feature Long-lasting 10-year lithium-ion battery Reliable electrochemical sensor UL certified Cons CO detector can be overly sensitive Some reports of false alarm Doesn't last for 10 years 3. USI Electric 5304 Hardwired Ionization Smoke and Fire Alarm Check Price on Amazon.com In terms of affordability and functionality, the USI Electric 5304 is one of the best smoke detectors available. It is a 12-volt AC hardwired alarm that responds quickly to flaming fires and with a backup battery to ensure that it functions even when there's a power failure. Much like other smoke detectors on the list, the USI Electric 5304 is perfect for new or replacement installations and can be fully interconnected with all USI and Universal Combat devices using existing wiring and mounting to further add to its proficiency. Consequentially, when one of them is triggered, they all sound the alarm. However, you don't have to worry about locating the room where there's a fire as this device is fitted with the company's patented Quickfire alarm that makes it possible to identify the first alarm to ring. Also, the USI Electrical 5304 features a quick activation pull-tab and a front-loading battery drawer for easy replacement without removing the alarm from the bracket. A direct replacement to the USI Electrical 5204, the manufacturer backs up the quality of this device with a 10-year limited warranty. An LED displays in the middle of the alarm and changes color based on the alarm's status while the tamper-resistant lock feature secures both the alarm and battery. A major complaint by users is that this smoke detector goes off randomly giving false warnings which can be annoying as the chirps can are loud. The alarms sound at 85 decibels. Pros Comes with a tamper-resistant feature Cheap 10-year limited warranty Easy to install Allows interconnectivity with 24 alarms Cons 4. Kidde AC Hardwired Interconnect Smoke Alarm with Hush i12040 Check Price on Amazon.com Kidde has been in the business of making devices that protect against fires and the AC powered, hardwired Kidde i12040 is one of the reliable and affordable smoke detectors from the company. It has the ability to function as a single unit or an interconnected system of up to 24 other alarms in your home so when one goes off, they all go off. To enhance inter-connectivity, this device includes a quick connect power harness that allows for quick and easy installation. This wire-in smoke detector also has a battery-backup feature in the form of a 9-volt battery that can be used to power the alarm when wiring is not an option or when there's an electric power outage. The Kidde i12040 is an ionizing alarm, designed to sense fire particles. Equipped with the company's patented Hush technology which may come handy during tests, this device allows you to temporarily turn off the alarm for up to 7 minutes after which the alarm will resume until the smoke dissipates from your home. Going further, the Kidde i12040 has a horn alarm of 85 decibels that sounds loud enough for you to hear the warning no matter where you may be in your home. It also features an updated alarm memory condition that helps deter alarm tampering and a tamper-resistant locking pin that helps to prevent alarm theft And to add, this smoke detector has been rigorously tested to meet UL requirements and it carries a 10-year warranty to guarantee durability. It also has a test feature that lets you easily confirm that the alarm is working as well as a system of LED lights that indicates the status of the device with red signifying normal operation and green indicating AC power. Pros Budget-friendly Easy to install Can link up to interconnected system of 24 devices A UL compliant device Hush feature to temporarily silence nuisance alarms Cons Consumes a lot of battery juice 5. Universal Security Instruments (USI) 1204 Wire-in Smoke Alarm Check Price on Amazon.com The USI 1204 is another reliable device that can help protect your family and home from all fast-flaming fires. Perfect for new or replacement installations, the USI 1204 Smoke Detector has a quick response time to deadly threats and is ideal for both commercial and residential use. Design-wise, this device features a protective cover to make it free of dust and spray contaminations so you won't have to remove the alarm during any construction procedures. Its large mounting plate and locking feature allow for easy installation onto drywall or old ceilings. Simply remove the unit from the base, replace and twist it back on! Moving on, this smoke and fire alarm provides a loud, clear, warning of up to 85 decibels when triggered but the convenient silencer button to temporarily quiet the alarm for a few minutes while you handle the threat. As mentioned earlier, this model is hardwired but it comes with a battery alternative so you never have to worry about power outages. The backup 9-volt battery ensures maximum protection at all times. As far as smart-connect goes, the USI 1204 can be linked to 18 units at a time within your home so that when one alarm is activated, all connected devices will sound the warning. The LED lights indicate the status of the device with red light being for smoke detection and the green light for normal functioning. It also comes equipped with heat and humidity sensors that can help it differentiate between smoke and steam. Because fires can double quickly, a fast detection of smoke can help protect your family in good time. This smoke detector uses an ionization smoke sensing technology that can respond to fires up to 87 percent faster than other smoke detectors. In addition to the USI 1204 being UL listed, the manufacturer stands behind this product with a 5-year limited warranty. Pros Easy to install Great design Loud alarm 5-year limited warranty Cons Some reported cases of false alarms 6. Kidde - 21026045 AC Hardwired Wireless Interconnect Smoke Detector Alarm Check Price on Amazon.com If you want to protect your family from fires but don't have a lot of money to spend, the Kidde 21026045 Hardwired Smoke Detector will get the job done. There are two product variations for the Kidde 21026045. One variant uses ionizing sensors to detect invisible fire particles (associated with flaming fires), a technology that's capable of detecting this type of danger faster than photoelectric alarms. On the flip side, the other variant adopts photoelectric technology, which may detect visible particles (associated with smoldering fires) sooner than photoelectric smoke alarms. Many people tend to choose one of the variants over the other but experts recommend that both types should be installed for maximum security. Nonetheless, they both come with a 9V battery backup to ensure non-stop monitoring even when there's a power outage. Like other products from the company, this model comes with a number of cool features with one of them being that it works well with different smoke alarms. In simpler words, the Kidde 21026045 makes it easy to expand the coverage of a current interconnected system. Simply replace one interconnected smoke alarm with the Kidde Wireless Alarm and when one device detects any danger and responds, they all give the alarm. At 85 dB, this model can get very loud but you can quickly and temporarily silence nuisance alarms by pressing the smart touch button. But keep in mind that the wireless interconnect is compatible with only other RF-SM-DC models or with other RF-SM-ACDC when the red wire is disconnected. Installing the Kidde 21026045 is super easy as it's just a matter of plugging and twisting in place - if you have a more recent one in the rest of your house. You set a code before you install it so that it will work to set the same code. Pros Can be interconnected to a current system Easy-to-access battery backup Silence button Loud 85-decibel alarm Cons Drains batteries leading to frequent replacements Related 6 Best Hardwired Smoke Detectors (2022 Review)
